A young woman with short, reddish-brown hair is standing in a forest. She is wearing a dark jacket over a light-colored t-shirt. The background is filled with tall, thin trees and lush green foliage, with sunlight filtering through the canopy, creating a soft, dappled light effect. The woman is looking slightly to her right with a gentle smile.

What I like the most about my work is that it has practical application and could make a real difference to healthcare.

When I was 19 I went to Melbourne for a 3-month research internship at Monash University, where I investigated novel ways to ameliorate the dose-limiting nephrotoxicity of polymyxin antibiotics.
